

Corporate Dictionary Manager (eCDM™)

Maintaining a corporate dictionary is key to unambiguous internal and external communication. It is the first step in data quality and data governance, as well as, an invaluable tool in managing the costs of data integration and regulatory compliance.

The ECCMA Corporate Dictionary Manager (eCDM™) leverages ISO 22745, the international standard for open technical dictionaries, and the ECCMA Open Technical Dictionary (eOTD®), the world's largest repository of over three million concepts with associated multilingual terminology collected from international, national and industry standards, as well as, industry glossaries and classifications.

Use the eCDM to create a corporate dictionary from spreadsheets, forms, reports and data models. A dictionary steward can monitor how the dictionary is used throughout the organization, as well as, identify and solve inconsistencies in the use of the organization's terminology.

The eCDM also has advanced features that allow you to manage multiple classifications, as well as, create and maintain metadata mapping solutions through concept equivalence. As an added bonus, the eCDM can be integrated with the ECCMA Data Requirements Registry (eDRR™), a cooperative repository of common cataloging and data exchange templates.
